

MegaPhase®

In EMC Testing, You're Only As Good As Your Weakest Link

One loose connection, a little too much loss or leakage, and the entire EMC test is useless. Don't take chances with the little things when you invest so much in the big things.

MegaPhase® EMC Lab Test Cable helps keep it all together.

They're ultra low loss and made of materials that meet electromagnetic compatibility standards. The cable assemblies offer excellent shielding. There's even a coating of "armor" for crush-proof protection. If your tests have specific EMI/RFI requirements, you'll find we have precisely the features you need. Make sure everything connects in your EMC tests. Give us a call or visit our website to learn more about MegaPhase EMC Lab Test Cable.

**With the right connections,
anything is possible.**
