

RF Test Technician

MegaPhase is an innovative manufacturer of coaxial cable assemblies and passive components for RF/Microwave applications supporting the biggest and best companies in Military, telecom, space, and semiconductors. Located in Stroudsburg, PA, the company offers its team a creative and successful working environment, excellent pay, and competitive benefits.

We are seeking a highly motivated RF Test Technician responsible for testing using vector network analyzers, inspection, RMA evaluations, and providing technical engineering support. This position reports to the QA Manager and will test both production orders and various projects for R&D.

Duties and Responsibilities

- Testing to include calibration/maintenance of Analyzer, review spec, test cables, troubleshoot issues, and review pin heights
- Inspection including receiving inspection of cable, receiving inspection of adapters, first piece evaluation, check cable configuration, and solder joint inspection to JSTD -001
- RMA evaluation to include evaluation of cable to customer comment, disposition rework/rebuild of cable, and failure observations
- Work within ISO 9001:2015 environment.

Education/Experience

- A.A.S diploma in Electronics Technology, certificate in an electronics-related major, or equivalent work experience
- 3 years' experience in an electronics test lab setting
- Experience with calibration and operation of precision test equipment
- Experience with high frequency vector network analyzers (e.g. – Agilent, Anritsu, Rhode & Schwarz)
- LabView programming a plus.
- Mathematics/physics aptitude
- Strong communications skills
- Ability to work in a team environment.
